## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of claims 6-11 in the reply filed on 12/27/04 is acknowledged. The traversal is on the ground(s) that see the election of 12/27/04. This is not found persuasive because the searches for device and process inventions are not coextensive.

The requirement is still deemed proper and is therefore made FINAL.

### ***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 6-11 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of U.S. Patent No. 6,677,199. Although the conflicting claims are not identical, they are not

Art Unit: 2814

patentably distinct from each other because the inclusion of a plurality of non-memory or logic transistors with a plurality of memory transistors is well-known.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kojima et al. (US patent 5,953,247).

With respect to claim 6, Kojima et al. teach a semiconductor device, comprising (see fig. 8 and associated text):

a memory array comprising a plurality of transistors, wherein the memory array includes:

a plurality of substantially parallel word lines 100;

a plurality of substantially parallel bit lines 108a, each of the plurality of the word lines being substantially perpendicular to each of plurality of the bit lines, and a first dummy word line 101 disposed at a periphery of the memory array, wherein the first dummy word line is substantially parallel to the plurality of word lines and overlaps at least one of the plurality of bit lines.

Kojima et al. fail to teach the presence of non-memory or logic transistors.

However, the addition of non-memory or logic transistors to memory array is well-known.

Art Unit: 2814

With respect to claim 7, Kojima et al. further teach that the dummy word line comprises of polysilicon. See col. 2, lines 30-35.

***Allowable Subject Matter***

5. Claims 8-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
